

Valve Automation

Pneumatic Control Panel
(Spring Return Actuated Valve)

Hydraulic Control Panel
(Double Acting Actuated Valve)

Our dedicated Valve Automation division within our facility in Peterhead, Scotland provides the most modern manufacturing techniques to ensure that high quality products and rapid deliveries are achieved.

Score Valve Automation technicians and equipment can be mobilised to an offshore or onshore location to undertake control system overhaul, repair or maintenance activities.

Score technicians are qualified for working offshore and are experienced in safe systems of work, risk assessments, toolbox talks etc and are committed to ensuring that all activities are performed safely.

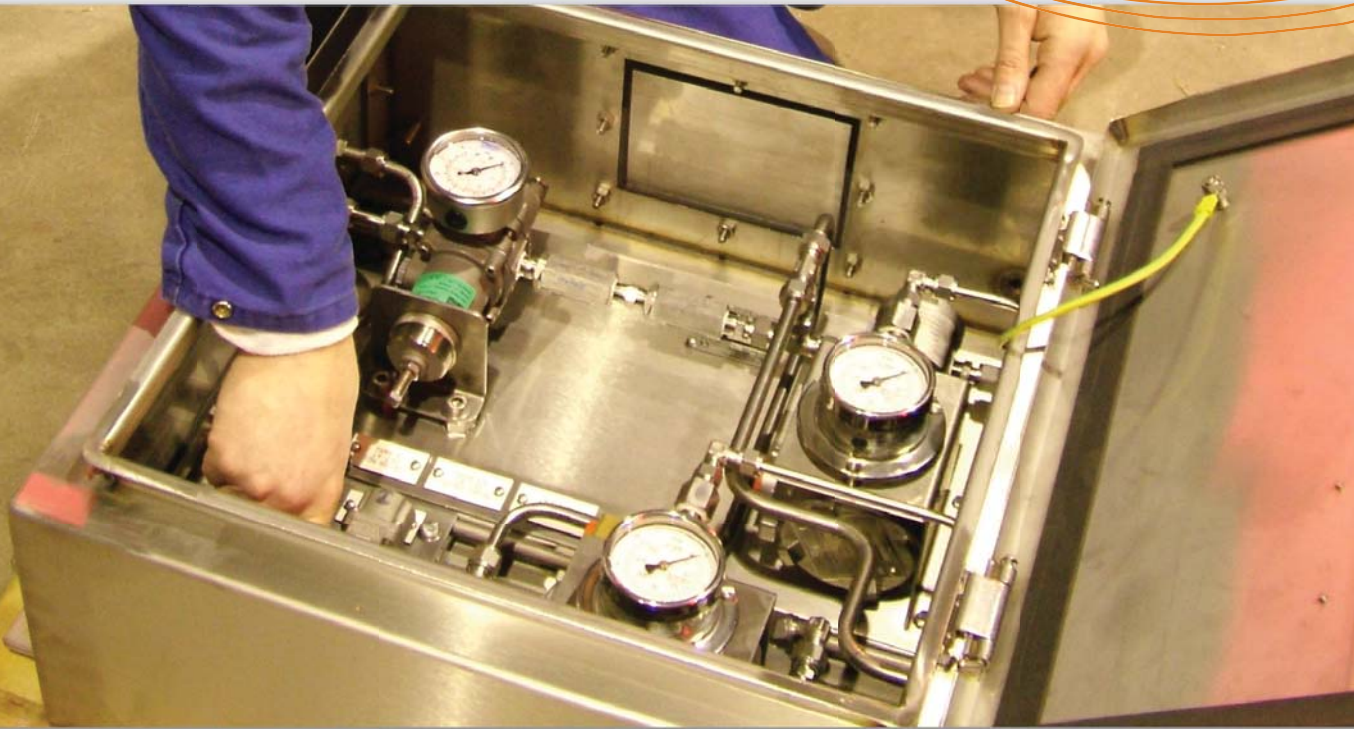

A full offshore workpack is prepared and reviewed by the Score Valve Automation technician during an in-house toolbox talk. The offshore workpack contains a detailed workscope (client approved), drawings (Score generated), risk assessments and procedures to ensure that the technician is fully briefed prior to departure.
